Body poster (Helvetica , 30 pt)

Poster Preparation Guidelines

This poster must be prepared in A0 format and may be designed using PowerPoint, Illustrator, or similar applications that allow high-quality layout control. Authors should maintain the base template provided, including the required conference logos, and preserve 30 mm margins on all sides to ensure a clean and consistent visual frame. The poster layout is organized in two vertical columns, allowing for a clear and balanced presentation of content.

The recommended typography for the poster is Helvetica, using 48 pt bold uppercase for the title to ensure long-distance readability, and 36 pt for authors and body text, promoting visual harmony and clarity across the layout. Authors are encouraged to keep the text concise and visually engaging, prioritizing clarity over density.

Posters should include the essential components of a research presentation: a clear and informative title, author names and affiliations, a brief introduction, an outline of the methods, the main results, and the key conclusions. Visual communication is central to this format, so the use of figures, diagrams, charts, and conceptual graphics is strongly recommended. All images and graphics must be provided at 300 dpi to guarantee print quality and avoid pixelation.

References may be included in a concise format at the bottom of the poster. Authors should ensure they hold the rights to any images or materials used.
